

Introduction

Design a simple, responsive, visually pleasant web page that could serve as your online professional portfolio / resume. Use HTML5, CSS, Bootstrap, JavaScript and jQuery.

Development

Tools that were used in development were

- Atom Editor
- Bootstrap for design
- Cyberduck for SSH
- Safari and Google Chrome for testing
- Nu HTML Checker for validation

Initial creation was straightforward as a static html web page. There is a button titled 'projects' when this button is pressed the container view that contains the projects is toggled from closed to open position and vice versa. Initially these are not clickable, when a new project is completed, these will be updated to link directly to that project.
